# Homology Of Classical Groups Over Finite Fields And Their Associated Infinite Loop Spaces

**homology of classical groups and k-theory** - introduction the study of the homology groups  $h_i(g, n, a)$ , where  $g$  is a classical group and  $a$  is a commutative ring with trivial  $g$ -action, seems important, notably because of their close relation to algebraic and hermitian  $k$ -theory and their appearance in **on the homology of classical lie groups - infolib-dbr(login)** - on the homology of classical lie groups by ichiro yokota (received mar. 31, 1957) 1. introduction we shall give, in this paper, cellular decompositions of the classical lie groups  $so(n)$ ,  $su(n)$  and  $sp(n)$ . the important role is to give the primitive cells by making use of cross-sections from cells such that spheres  $S^{n-1} = so(n)/$  **the cohomology of quotients of classical groups - core** - the homology and cohomology rings of the classical compact lie groups  $so(n)$ ,  $su(n)$ ,  $sp(n)$  are well known (for example see borel [3]). most of these groups have non-trivial centers, and in [4], borel investigated the quotients of these groups by central subgroups, **homology of the classical groups over the dyer-lashof ...** - homology of the classical groups over the dyer-lashof algebra 2) by stanley o. kochman abstract. the action of the dyer-lashof algebra is computed on the homology of the infinite classical groups (including spin), their classifying spaces, their homogeneous spaces,  $im_j$ ,  $bjm_j$  and  $bbso$ . some applications are given while applications by other **the homology of the milnor fiber for classical braid groups** - the homology of the milnor fiber for classical braid groups filippo callegaro in this paper we compute the homology of the braid groups, with coefficients in the module  $\mathbb{Z}[q^{-1}]$  given by the ring of laurent polynomials with integer coefficients and where the action of the braid group is defined by mapping each generator of **homology in classical and molecular biology1 - joel velasco** - homology in classical and molecular biology1 cohn patterson department of palaeontology, british museum (natural history) hypotheses of homology are the basis of comparative morphology and comparative molecular biology. the kinds of homologous and nonhomologous relations in clas- **homology of classical lie groups made - core** - homology of classical lie groups made discrete, iii 211 shortly after it became available. in march 1987, a letter from suslin [68] finally reached me after a 2 months journey. in it, suslin sketched a number of his results dating back to 1982-3. specifically, he had shown the unique divisibility of the **homological stability for classical groups** - homological stability for classical groups by jan essert holz "auser weg 17, 64807 dieburg, germany e-mail: jan@essertme abstract associated to every group with a weak spherical Tits system of rank  $n+1$  with an appropriate rank  $n$  subgroup, we construct a relative spectral sequence involving group homology of levi subgroups of both groups. using **the homology of the milnor fiber for classical braid groups** - the homology of the milnor fiber for classical braid groups 1907 multiplication by  $q$  would be equivalent, we use  $q$ , which seems more natural to us, and also for coherence with [13], [14], [15]. the complex  $c_n/n$  coincides with the complex (defined in [23]) that computes the cohomology of the group  $br_n$  with local coefficients  $r$ . **homological stability for classical groups - citeseerx** - homological stability for classical groups jan essert may 1, 2009 associated to every group with a weak Tits pair of type  $A_{n+1}$  or  $B_{n+1}$  with an appropriate rank  $n$  subgroup ... **quandle homology: computations and applications** - quandle homology: computations and applications j.s. carter & m. saito organization quandle tables quandle homology cocycle invariants classical and virtual knots knotted surfaces algebras, categories and others organization a sel sh overview { i want to have a list of what are known and what are available (i forget) computations by computers ... **khovanov's homology for tangles and cobordisms - arxiv** - khovanov's homology for tangles and cobordisms 1447 between these smoothings. then one applies a certain functor  $f$  (a  $(1 + 1)$ - dimensional tqft) to this topological picture, resulting in an algebraic picture  $alg$ , a complex involving modules and module morphisms whose homology is shown to be a link invariant. **homological stability for completed homology** - ogy for classical homology groups. (we confine ourselves here to the non-obvious remark that all the classical homology groups at level  $n(pr)$  can be recovered from the completed homology groups.) it is possible to extract from our argument explicit bounds for  $n$  in terms of  $d$  which imply that  $h_d(Z_p)$  and  $h_d(F_p)$  are stable (see **cohomology and k-theory of compact lie groups** - cohomology and k-theory of compact lie groups based on the classical work of [ce] and [a1], as well as the article [r]. these become standard results in the algebraic topology of compact lie groups. for the computation of the cohomology groups of compact lie groups, we demonstrate **a gentle introduction to homology, cohomology, and sheaf ...** - (1)homotopy groups. (2)homology groups. (3)cohomology groups. the above are listed in the chronological order of their discovery. it is interesting that the first homotopy group  $\pi_1(x)$  of the space  $x$ , also called fundamental group, was invented by poincaré (analysis situs, 1895), but homotopy basically did not evolve until the 1930s.
